

User Manual: Application Login Interface

Overview :

- The Login Interface is a part of the application allowing users to access the system by entering their credentials. This manual guides users on how to interact with the login form and access the system.

Components :

- Login Form Elements:
- Username Dropdown: Select your username.
- Password Input: Enter your password.
- Login Button: Click to access the system.
- Register Button: Opens the user registration form.

Functions :

- Login: Validates user credentials against the database.
- User Registration: Allows new users to register through a separate form.
- Database Connection: Connects to a user database to fetch and validate user information.

Instructions for Users :

Logging In

- Username Selection :
- Choose your username from the dropdown list.

Password Entry:

- Input your password into the designated field.

Accessing the System:

- Click the “Login” button to access the system.

Registering as a New User

- If you are a new user:
- Click the “Register” button to open the user registration form.

Important Notes:

Error Handling:

- Ensure the correct username and password are entered. Contact support for login issues.

Access Levels:

- Access within the application is based on permissions defined by the system administrator.

Database Connection:

- The application connects to a user database to validate your credentials. Ensure a stable internet connection.

User Registration:

- New users can register through the provided registration form.

Permissions:

Your access within the system may vary based on your assigned permissions.

This user manual aims to guide you through the login process within the application. For any further assistance or issues, please contact the system administrator or support team.
